CLEAN VERSION OF REPLACEMENT
CLAIMS 1, 5

1. In a multiple drawer storage cabinet assembly having overhead tracks from which drawers are suspended and along which the drawers can be moved from storage within the cabinet to a location externally of the cabinet enabling access to the drawers, the improvement comprising:

each drawer including an outer support frame with a top member;

first and second roller apparatus secured to the top member in spaced apart aligned relation for receipt within a hanging guide having a stanchion, a pair of axles mounted to the stanchion, a pair of rollers mounted on each axle and the two axles arranged parallel to each other, the two rollers, one of each pair, on one side of the stanchion and in the same rotational plane, each said roller having a continuously curved convexly extending peripheral edge; and

a generally U-shaped hanging guide with two arms spaced apart sufficiently to receive a pair of mounted rollers therebetween, the guide arms lower edge portions formed facing each other to provide curved holders along which a pair of rollers can move and hang therefrom, said curved holders continuously contacting the peripheral each of each roller and adjacent opposite side portions of the peripheral edge.

CLEAN VERSION OF REPLACEMENT

CLAIMS 1 and 5

5. A storage cabinet assembly as in claim 1, in which a
stop arm is secured to a stanchion outwardly along the path of drawer movement
away from the rollers for engaging the drawer and providing a limit of drawer
movement.
